

COATING PROCESS AND COMPOSITION FOR SAME

ABSTRACT

5 There is disclosed a composition for forming a protective coating upon a
substrate. The composition has been found particularly useful for forming a
protective coating upon components of automotive vehicles, such as a bedliner for a
pick-up truck. The composition may include, without limitation, an isocyanate
component and an amine component and optionally includes one or more of a
10 catalyst, stabilizer, pigment, fire retardant or other additives.
